REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Regarding Independent Claims 1, 12 and 16

Claims 1, 12, and 16 recites a method, system and computer program product configured to determining a policy inventory (P) using the at least one computer; determining a policy and trapped inventory (PT) based on a difference between the excess inventory with the manufacturing limitation and the policy inventory and the excess inventory without the manufacturing limitation using the at least one computer; determining an optimum inventory (O) for each analysis point based on the policy and trapped inventory (PT) and the trapped inventory (OT), for each analysis point using the at least one computer according to the following algorithms $AP-P = \max(0, AP_{OT} - AP_{PT})$ and: $AP-O = AP_{OT} - AP-P$ wherein AP_{OT} , is the consumption calculated with the trapped only (OT) data; AP_{PT} , is the consumption calculated with the policy and trapped (PT) data; $AP-O$ are part of the AP_{OT} that is not affected by the policy inventory; and determining an impact of the policy inventory on an inventory consumption using the at least one computer".

The most remarkable prior art on record is directed to Kurihara et al. (Patent Publication 2003/0171963). Kurihara et al. is directed to a production planning method and system for production planning. In particular, a production planning method for the production of two or more products within the same period, demand fluctuations

can be accommodated smoothly, without large modifications of the production plan, and without maintaining excessive inventory *Kuirhara et al. (Abstract)*.

Kurihara et al. does not teach the limitation of the claimed invention, where determining a policy and trapped inventory based on a difference between the excess inventory with the manufacturing limitation and the policy inventory and the excess inventory without the manufacturing limitation, determining an optimum inventory for each analysis point based on the policy and trapped inventory and the trapped inventory, for each analysis point using the at least one computer according to the following algorithms $AP-P = \max(0, AP_{OT} - AP_{PT})$ and: $AP-O = AP_{OT} - AP-P$ wherein AP_{OT} , is the consumption calculated with the trapped only (OT) data. Moreover, none of the prior art of record remedies the deficiencies found in Kurihara et al.

Furthermore, neither the prior art, the nature of the problem, nor knowledge of a person having ordinary skill in the art, provide any reasonable rationale to combine prior art teachings.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Drawings

The drawings were received on September 7, 2004. These drawings are sufficient.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Cargille et al. Patent Publication 2003/0050817 discloses a capacity driven production planning.

Kakourous et al. United States Patent # 7,249,068 discloses a spot market-based inventory planning.
